

Template Catalogue

15 templates · preconditions P2.8 and P2.9

The wording is not here, and that is deliberate.

A template's content is a Word file written by counsel and published as an immutable version. This catalogue says which templates exist, what each is for, and which data it needs merged in. Inventing contract wording and shipping it as a default would produce a document that looks authoritative and has never been read by a lawyer — worse than having none.

Global by default.

A jurisdiction-specific template has to earn itself, because every split doubles the work of every future amendment. Both splits below state the legal difference that forces them.

The templates

Master Services Agreement (global)

msa_global

GLOBAL

Agreement type: Master Services Agreement · Merge data: contract, supplier, client, commercial

Umbrella terms for all supplier work. Call-offs and statements of work hang from it.

Total Facilities Management Agreement

tfm_global

GLOBAL

Agreement type: Total Facilities Management Agreement · Merge data: contract, supplier, client, service, commercial

Single supplier across the estate, with an integrated service schedule and governance model.

Hard FM Services Agreement

hard_fm_global

GLOBAL

Agreement type: Hard FM Services Agreement · Merge data: contract, supplier, client, service, commercial

Mechanical, electrical, plumbing, fire and lifts, with the statutory compliance schedule.

Soft FM Services Agreement (UK)

soft_fm_uk

GB

Agreement type: Soft FM Services Agreement · Merge data: contract, supplier, client, service, commercial

Cleaning, catering, security, waste and grounds.

WHY IT IS SPLIT TUPE. On a UK service-provider change the incumbent's staff transfer by operation of law, and the contract must allocate employee liability information, indemnities and pension obligations. There is no equivalent in most other jurisdictions, and a clause that assumes it would be meaningless there.

Soft FM Services Agreement (global) soft_fm_global GLOBAL

Agreement type: Soft FM Services Agreement · Merge data: contract, supplier, client, service, commercial

Cleaning, catering, security, waste and grounds outside the UK.

Planned Preventive Maintenance Agreement ppm_global GLOBAL

Agreement type: Planned Preventive Maintenance Agreement · Merge data: contract, supplier, client, service

Scheduled maintenance to a written regime, with the asset register as a schedule.

Reactive Maintenance Call-Off reactive_global GLOBAL

Agreement type: Reactive Maintenance Call-Off · Merge data: contract, supplier, service, commercial

Called off against agreed rates and response times when something fails.

Framework Agreement framework_global GLOBAL

Agreement type: Framework Agreement · Merge data: contract, supplier, client, commercial

Multi-supplier framework with no committed volume; sets terms for future call-offs.

Statement of Work sow_global GLOBAL

Agreement type: Statement of Work · Merge data: contract, supplier, service

Scoped, priced work under an existing MSA. Carries no standalone liability terms.

Equipment Supply and Installation Agreement equipment_supply_global GLOBAL

Agreement type: Equipment Supply and Installation · Merge data: contract, supplier, client, commercial

Plant and equipment with installation, title transfer, warranty and defects liability.

Consultancy and Professional Services Agreement consultancy_global GLOBAL

Agreement type: Consultancy and Professional Services · Merge data: contract, supplier, client, commercial

Surveys, design, compliance audits. Professional indemnity and deliverable ownership.

Mutual Non-Disclosure Agreement nda_mutual_global GLOBAL

Agreement type: Non-Disclosure Agreement · Merge data: supplier, client

Signed before any commercial discussion. Mutual by default — a one-way NDA on our paper invites a negotiation that costs more than the protection is worth.

Data Processing Agreement (UK/EU)

dpa_uk_eu

GB,EU

Agreement type: Data Processing Agreement · Merge data: supplier, client

Where a supplier processes personal data — access control, CCTV, visitor management.

WHY IT IS SPLIT UK GDPR and EU GDPR require specific article 28 terms and, for transfers, the relevant standard contractual clauses. The required wording is set by law rather than by preference, so a global template would be non-compliant in both.

Variation Agreement

variation_global

GLOBAL

Agreement type: Variation Agreement · Merge data: contract, supplier, client

Amends an existing contract, naming the clauses changed and the effective date.

Termination and Settlement Agreement

termination_global

GLOBAL

Agreement type: Termination and Settlement Agreement · Merge data: contract, supplier, client

Ends a contract, settles sums owed, and handles exit obligations and data return.

Merge data

Fields the generation pipeline fills in. A token used by a template and missing here becomes a hole in the finished document that reads as a formatting error rather than as missing data.

GROUP	FIELDS
contract	contract_number, title, start_date, end_date, contract_value, currency_code, notice_period_days
supplier	supplier_name, supplier_registered_number, supplier_address, supplier_contact
client	legal_entity_name, legal_entity_registered_number, legal_entity_address, governing_law, jurisdiction
service	service_category, facility_names, service_hours, response_times, kpi_schedule
commercial	payment_terms_days, rate_card_reference, indexation_basis, liability_cap_amount

Draft for discussion. Not reviewed by counsel and not legal advice. Every value here is tenant-editable configuration.
